

In the Claims:

Please amend the claims as follows.

1. (currently amended) A method of providing remote user activity information regarding recently accessed documents of remote users to a local user, comprising:

obtaining, by an awareness client application process executing on a local computer system, from an associated awareness server application process executing on a server computer system, an online status of said remote computer system user;

displaying, by said awareness client application process, within a user interface displayed on said local computer system, an awareness display object associated with said remote computer system user, wherein said awareness display object displays an identity of said remote computer system user, wherein said awareness display object further includes a visual indication of said online status of said remote computer system user;

obtaining, by said awareness client application process on said local computer system, responsive to said displaying said awareness display object associated with said remote computer system user, document access activity information regarding said remote computer system user, wherein said document access activity information includes the identity of a plurality of documents accessed by said remote computer system user;

displaying, by said awareness client application process, a special icon in said user interface displayed on said local computer system;

detecting a selection of said awareness display object associated with said remote computer user and said special icon by said local computer system user; and

displaying, by said awareness client application process, in response to said detecting said selection of said awareness display object associated with said remote computer system user and said special icon by said local computer system user, only said document access activity information regarding said remote computer system user, together with a visual indication of whether any of said plurality of documents accessed by said remote computer system user are currently opened by said remote computer system user, in said user interface displayed on said local computer system.

2. (previously presented) The method of claim 1, wherein said document access activity information regarding said remote computer system user further comprises times at which each of said plurality of documents was accessed by said remote computer system user.

3. (previously presented) The method of claim 2, wherein said document access activity information further comprises numbers of keystrokes and mouse clicks used by said remote computer system user to access each of said plurality of documents.

4. (currently amended) The method of claim 3, wherein said document access activity information further comprises names of application programs used by said remote computer system user to access said plurality of documents.

5. (previously presented) The method of claim 4, wherein said document access activity information further comprises actions performed during document accesses by said remote computer system user.

6. (original) The method of claim 3, wherein said presenting said document access activity information comprises presenting said document activity information in at least one pop-up display window.

7. (previously presented) The method of claim 1, further comprising:

presenting an interface to said local computer system user, wherein said interface enables said local computer system user to indicate whether any document access activity information regarding said local computer system user is to be shared with other users.

8. (previously presented) The method of claim 1, further comprising:

presenting an interface to said local computer system user, wherein said interface enables said local computer system user to specify document access activity information regarding said local computer system user that is to be shared with other users.

9. (previously presented) The method of claim 1, further comprising:

presenting an interface to said local computer system user, wherein said interface enables said local computer system user to specify one or more other users with which document access activity information regarding said local computer system user is to be shared.
